İZZET CAN ÖZTOZLU

Full-Stack Developer | React · TypeScript · Node.js · Python · Docker

Istanbul, Türkiye | izzet@oztozlu.dev | linkedin.com/in/izzetcanoztozlu | github.com/Contraill | oztozlu.dev

SUMMARY

Information Systems and Technologies graduate (Jan 2027) who builds and ships full-stack web applications with React, TypeScript, Next.js, Node.js and Python (FastAPI). Ships with tests and CI gates (Vitest, Playwright, pytest, GitHub Actions), deploys with Docker, Vercel and Firebase, and runs a self-hosted Linux homelab across two sites.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C/C++, PHP, SQL, HTML, CSS, Bash
Frontend: React, Next.js (App Router), Vue 3, Three.js / React Three Fiber, Tailwind CSS, Zustand, Vite, PWA, i18n
Backend & Data: Node.js, Express, FastAPI, REST APIs, WebSockets (Socket.IO), JWT, SQLAlchemy, Alembic, SQLite, MySQL, Firebase
Testing & DevOps: Vitest, Playwright, pytest, GitHub Actions (CI/CD), Docker, Docker Compose, Vercel, Firebase Hosting, Git
Infrastructure: Linux (Arch, Debian), Raspberry Pi, Tailscale, OpenWrt, nginx, CasaOS, Oracle Cloud

EXPERIENCE

Up&Running Cloud IT Services · Web Developer Intern Jul 2025 – Aug 2025
Istanbul, Türkiye (Hybrid)

- Built a Vue 3 + Firebase web application (Authentication, Cloud Firestore, Hosting) for a breast-cancer screening questionnaire, with a participant flow and an admin review panel.
- Developed reusable, modular UI components with PrimeVue and client-side routing with Vue Router.
- Set up GitHub Actions to build and deploy to Firebase Hosting on every merge and to create preview channels for pull requests.
- Continued the project after the internship: moved authorization into Firestore Security Rules, removed client-side admin escalation and added emulator-based security tests that gate every deployment.

PROJECTS

Helios: Interactive Solar System Explorer heliios.vercel.app
Next.js 16, React 19, TypeScript (strict), Three.js / R3F, Zustand, Zod, Tailwind CSS, Vitest, Playwright

- Shipped v1.0.0 with detail pages for 57 Solar System bodies, a JPL Horizons-backed timeline, two-world comparison and NASA/JPL data with explicit fallbacks, prerendered in English and Turkish.
- Built a CI pipeline in which Vercel production deploys wait for lint, typecheck, unit tests, build and a cross-browser Playwright suite.

CampusEats: QR Table Ordering System (Graduation Project) github.com/Contraill/CampusEats
React 19, Vite, Node.js, Express, SQLite, Socket.IO, JWT, PWA

- Designed a three-role system (customer, restaurant manager, admin): customers order from a table QR code; staff manage orders, tables, menu and payments on a live dashboard.
- Implemented role-based JWT authorization and per-restaurant Socket.IO rooms, with tests for forged/expired tokens and cross-tenant access run in GitHub Actions on Node 20, 22 and 24.

Orbis: Self-Hosted Multi-Profile Media Platform github.com/Contraill/Orbis
FastAPI, SQLAlchemy, Alembic, SQLite, React, TypeScript, Docker Compose

- Built and deployed on my Raspberry Pi 5 (ARM64) home server: per-profile lists, resume and history, synchronized Watch Together rooms and a pluggable provider-adapter layer with automatic fallback.
- Covered the API and database migrations with pytest tests that run in GitHub Actions on every push.

Homelab & Nodesk: Multi-Site Network Monitoring github.com/Contraill/Nodesk
Raspberry Pi, Tailscale, OpenWrt, Docker, Python, Bash

- Run a personal network across two homes and Oracle Cloud VMs: a Raspberry Pi server (Docker, CasaOS) and an OpenWrt router joined over Tailscale with subnet routes and an exit node; re-addressed a LAN to remove subnet overlap.
- Wrote a fail-open exit-node watchdog for the router (running unattended for months) and Nodesk, a dependency-free Python tool that maps devices, services and tailnet links using push-based agents (no port scanning) and sends ntfy/Telegram alerts.

More:

- **Mochi** (C++, ESP32-C3): desk-pet firmware with 53 animated faces in a custom delta + RLE format, touch/motion reactions and a web panel.
- **Nothing KDE** (QML, Python): Plasma 6 theme suite with 19 widgets; **huepr** (JavaScript, Native Messaging): Firefox extension that re-themes websites when the wallpaper changes.

EDUCATION

Eastern Mediterranean University, Famagusta, North Cyprus Sep 2022 – Jan 2027
B.Sc. Information Systems and Technologies

- 75% academic merit scholarship. Coursework: Data Structures and Algorithms, Database Systems, Software Development, Web Development.

ACTIVITIES & LANGUAGES

Activities: IEEE Xtreme 19 participant
Languages: Turkish (native), English (B2, passed the EMU English proficiency exam)
